III. AMENDMENTS TO THE CLAIMS:

This listing of claims replaces all prior versions, and listings, of claims of the application.

1. (Currently amended) A method of presenting a control on a computer user interface comprising:

retrieving stored information on request by a user;

determining a nature of the stored information;

selecting a control according to the nature of the information based on whether the nature of the stored information meets a threshold set for the nature; and creating the control on the interface including the information.

- 2. (Currently amended) A <u>The</u> method according to claim 1, wherein the control is selected from two or more control types according to the nature of the information.
- 3. (Currently amended) A The method according to claim 2, wherein each control is suited for use with information of a particular nature.
- 4. (Currently amended) A <u>The</u> method according to claim 3, wherein the information comprises a plurality of records and the nature of the information relates to the number of records.
- 5. (Currently amended) A The method according to claim 4, wherein the control is selected according to the number of records comprising the information.

- 6. (Currently amended) A The method according to claim 5, wherein the selected control is suited for displaying the number of records comprising the information.
- 7. (Currently amended) A The method according to claim 4, wherein the control is selected according to a threshold which relates to a quantity of records.
- 8. (Currently amended) A The method according to claim 7, wherein the selected control is suited to displaying the number of records comprising the information.
- 9. (Currently amended) A The method according to claim 8, wherein the control is a combination box or a list box.
- 10. (Currently amended) A computer program product comprising a computer useable medium having computer readable program code embodied therein for presenting a control on a computer user interface, the computer program product comprising:

program code configured to retrieve information requested by a user;

program code configured to determine a nature of the information;

program code configured to select a control according to the nature of the information

based on whether the nature of the information meets a threshold set for the nature; and

program code configured to create the control on the interface including the information.

- 11. (Currently amended) A The computer program product according to claim 10, wherein the selection program code selects the control from two or more control types according to the nature of the information.
- 12. (Currently amended) A <u>The</u> computer program product according to claim 11, wherein each control is suited for use with information of a particular nature.
- 13. (Currently amended) A <u>The</u> computer program product according to claim 12, wherein the information comprises a plurality of records and the nature of the information relates to the number of records.
- 14. (Currently amended) A <u>The</u> computer program product according to claim 13, wherein the selection program code selects the control according to the number of records comprising the information.
- 15. (Currently amended) A <u>The</u> computer program product according to claim 14, wherein the selected control is suited to displaying the number of records comprising the information.
- 16. (Currently amended) A The computer program product according to claim 15, wherein the control is a combination box or a list box.
- 17. (Currently amended) A <u>The</u> computer program product according to claim 13, wherein the 09/964,097

selection program code selects the control according to a threshold which relates to a quantity of records.

- 18. (Currently amended) A <u>The</u> computer program product according to claim 17, wherein the selected control is suited to displaying the number of records comprising the information.
- 19. (Currently amended) A The computer program product according to claim 18, wherein the control is a combination box or a list box.
- 20. (Currently amended) A system for presenting a control on a computer user interface, the system comprising:

means for retrieving information requested by a user;

means for determining a nature of the information;

means for selecting a control-according to the nature of the information based on whether
the nature of the information meets a threshold set for the nature; and

means for creating the control on the interface including the information.

- 21. (Currently amended) A The system according to claim 20, wherein the means for selecting is adapted to select the control from two or more control types according to the nature of the information.
- 22. (Currently amended) A The system according to claim 21, wherein each control is suited for

use with information of a particular nature.

- 23. (Currently amended) A The system according to claim 22, wherein the information comprises a plurality of records and the nature of the information relates to the number of records.
- 24. (Currently amended) A The system according to claim 23, wherein the means for selecting is adapted to select the control according to the number of records comprising the information.
- 25. (Currently amended) A The system according to claim 24, wherein the selected control is suited to displaying the number of records comprising the information.
- 26. (Currently amended) A The system according to claim 25, wherein the control is a combination box or a list box.
- 27. (Currently amended) A The system according to claim 23, wherein the means for selecting is adapted to select the control according to a threshold which relates to a quantity of records.
- 28. (Currently amended) A The system according to claim 27, wherein the selected control is suited to displaying the number of records comprising the information.
- 29. (Currently amended) A The system according to claim 28, wherein the control is a combination box or a list box.
